

ABSTRACT

Methods and apparatus are provided for increasing and/or for monitoring a party's compliance with a schedule for taking medicines. In a first embodiment, a method is provided that includes receiving information regarding whether at least two medicine containers were able to communicate during a pre-determined time period, and determining a level to which the party complied to a medicine schedule based on the information. The method further includes rewarding the party based on the party's level of compliance. Systems, apparatus and computer program products are provided for carrying out the above-described embodiments and numerous other embodiments.
